Country of origin	Italy

**For shipping:**

✓ ADR ✓ RID ✓ ADN ✓ IMDG ✓ IATA

Description

Class 9 labels, placards or panels shall be used for shipping or transporting miscellaneous dangerous substances or articles. Our hazard labels, placard and panels of class 9 comply in shape, color, format, symbol and text with the specimen designs as shown in the ADR, RID, ADN, IMDG, ICAO/IATA Regulations so they are suitable for transport of dangerous goods by road, by rail, by inland waterways, by sea and by air. The adhesive of all our labels, placards and panels is such that they will still be identifiable on package surviving at least 3 months immersion in the sea as required by the IMDG Code.

Our Class 9 products are available in different versions: paper, PE, PVC or PVC on aluminum or steel support.

There are available in stock labels containing the text "Miscellaneous", labels with UN number (to be completed or already preprinted) or also with UN number, PSN and Net Quantity.
